

Vasectomy Reversal Money Back Guarantee

In rare circumstances, a man may undergo a microsurgical vasectomy reversal and not have sperm return to his semen. Since he and his partner likely still want to have children, Minnesota Urology will **refund the surgical fee** in hopes that this will assist the couple in their ongoing desire to have children either through a redo surgery, IVF or adoption.

- The guarantee applies to men who never attain a sperm count in excess of 1 million sperm within one year of vasectomy reversal.
- **This guarantee ONLY applies to Minnesota Urology surgical fees;** not those of any outside entity, including the surgery center or 3rd parties.
- To qualify for this guarantee, the patient must be present for semen analyses at Cornerstone at 6 weeks and then every three months for the first year.

The reimbursement schedule is based upon the specifics of the case and is as follows:

Less than 3 Years - since the vasectomy	\$3,500
3-8 Years - since the vasectomy	\$3,000
9-14 Years - since the vasectomy	\$1,500
>14 Years - since the vasectomy	\$750

This schedule applies only to vasectomy reversals performed by Dr. Milbank following scrotal vasectomies (scrotal vasectomies comprise 99% of vasectomies performed).

**I understand the terms outlined above, for the money back guarantee,
which applies to Minnesota Urology's surgical fee only.**
